## About us

Chemy Gostar Aran Company was established in 2004 with the aim of producing chemicals needed by domestic and foreign markets, and after about 15 years of activity in the fields related to the production of granite tile colors and chemical fertilizers, in 2018 its mission have been changed to innovative and strategic materials productions such as high purity magnesium oxide and after settling in the science and technology park and employing diverse and knowledgeable forces in this field as well as having facilities such as a well-equipped laboratory, it has succeeded in producing this product. This company also operates in the other technological fields related to chemicals. Chemy Gostar Aran Company operates as the first producer of high purity synthetic magnesium oxide in the country.

At the present, the workshop production of this product is being done in Kashan, Iran, and a factory is being set up in Amirkabir town on a land area of 20,000 square meters. Other products produced by the company include synthetic magnesium hydroxide, magnesium chloride, calcium chloride and water treatment nano-resin, which was produced for the first time in the country at Chemy Gostar Aran Company. Also, this company provides consulting services regarding the chemical problems of manufacturing companies.

Since its establishment, Chemy Gostar Aran Company has put the production of quality products based on global standards at the top of its plans and goals. At Chemy Gostar Aran Company, we are interested in creating a network of values and we try to fulfill our values.

## Features of the company
